

An OWL-Based Ontology for NIS2 Directive Article 21 Compliance: Automated Validation and Reasoning Framework for Cybersecurity Risk-Management Measure.

Table of Contents

1. Introduction

- 1.1 Background and Context
- 1.2 Problem Statement
- 1.3 Research Objectives
- 1.4 Research Questions
- 1.5 Scope and Limitations
- 1.6 Thesis Structure

2. Literature Review

- 2.1 Semantic Web Technologies and Ontologies
- 2.2 OWL and RDF Standards
- 2.3 Regulatory Compliance in Cybersecurity
- 2.4 NIS2 Directive Overview
- 2.5 Existing Compliance Tools and Approaches
- 2.6 Ontology-Based Compliance Systems
- 2.7 Research Gap

3. Theoretical Foundation

- 3.1 Web Ontology Language (OWL)
- 3.2 RDF and RDFS Fundamentals
- 3.3 Ontology Engineering Principles
- 3.4 Reasoning in Description Logics
- 3.5 SPARQL Query Language
- 3.6 Knowledge Graph Visualization

4. NIS2 Directive Article 21: Requirements Analysis

- 4.1 NIS2 Directive Overview

- 4.2 Article 21 Requirements
- 4.3 Essential vs. Important Entities
- 4.4 Required Cybersecurity Measures
- 4.5 Compliance Criteria
- 4.6 Challenges in Manual Compliance Verification

5. Methodology

- 5.1 Ontology Development Process
- 5.2 Requirements Gathering
- 5.3 Class Hierarchy Design
- 5.4 Property Definition
- 5.5 Validation Rules Design
- 5.6 System Architecture
- 5.7 Technology Stack Selection

6. Ontology Design and Implementation

- 6.1 Ontology Structure
- 6.2 Core Classes
 - 6.2.1 Entity Classes
 - 6.2.2 Risk Management Measure Classes
 - 6.2.3 Supporting Classes
- 6.3 Object Properties
- 6.4 Data Properties
- 6.5 Class Hierarchies and Relationships
- 6.6 Ontology Validation

7. System Implementation

- 7.1 System Architecture
- 7.2 Backend Implementation
 - 7.2.1 RDF/OWL Parsing
 - 7.2.2 API Endpoints

7.2.3 Reasoning Engine

7.2.4 Validation Logic

7.3 Frontend Implementation

7.3.1 Interactive Visualization

7.3.2 User Interface Design

7.3.3 Real-time Validation

7.4 Integration and Testing

8. Key Features and Functionality

8.1 Interactive Graph Visualization

8.2 Ontology Validation System

8.3 OWL Reasoning Capabilities

8.4 SPARQL Query Interface

8.5 Class Hierarchy Lookup

8.6 Compliance Checking

8.7 Measure Coverage Analysis

9. Evaluation and Results

9.1 Ontology Completeness

9.2 Validation Accuracy

9.3 Reasoning Performance

9.4 Usability Assessment

9.5 Case Studies

9.6 Comparison with Existing Approaches

10. Discussion

10.1 Problem Solutions

10.2 Contributions to the Field

10.3 Limitations

10.4 Future Work

10.5 Practical Implications

11. Conclusion

11.1 Summary of Contributions

11.2 Achievement of Objectives

11.3 Future Research Directions
