

An OWL-Based Ontology for NIS2 Directive Article 21 Compliance: Automated Validation and Reasoning Framework for Cybersecurity Risk- Management Measures.

Table of Contents

1. Introduction

- 1.1 Background and Context
- 1.2 Problem Statement
- 1.3 Research Objectives
- 1.4 Research Questions
- 1.5 Scope and Limitations
- 1.6 Thesis Structure

2. Literature Review

- 2.1 Semantic Web Technologies and Ontologies
- 2.2 OWL and RDF Standards
- 2.3 Regulatory Compliance in Cybersecurity
- 2.4 NIS2 Directive Overview
- 2.5 Existing Compliance Tools and Approaches
- 2.6 Ontology-Based Compliance Systems
- 2.7 Research Gap

3. Theoretical Foundation

- 3.1 Web Ontology Language (OWL 2)
- 3.2 RDF and RDFS Fundamentals
- 3.3 Ontology Engineering Principles
- 3.4 Reasoning in Description Logics
- 3.5 SPARQL Query Language
- 3.6 SHACL (Shapes Constraint Language)
- 3.7 SKOS Vocabulary and Semantic Alignment

4. NIS2 Directive Article 21: Requirements Analysis

- 4.1 Article 21 Legal Text and Scope
- 4.2 Article 21 Requirements
- 4.3 Essential vs. Important Entities
- 4.4 Required Cybersecurity Measures (a)–(l)
- 4.5 Compliance Criteria
- 4.6 Challenges in Manual Compliance Verification

5. Methodology

- 5.1 Ontology Development Process (METHONTOLOGY)
- 5.2 Requirements Gathering

- 5.3 Competency Questions Definition
- 5.4 Class Hierarchy Design
- 5.5 Property Definition
- 5.6 Validation Rules Design
- 5.7 System Architecture
- 5.8 Technology Stack Selection

6. Ontology Design and Implementation

- 6.1 Ontology Structure and Namespace
- 6.2 Core Classes
 - 6.2.1 Entity Classes (Essential / Important)
 - 6.2.2 Risk Management Measure Classes
 - 6.2.3 Supporting Classes (Risk, Standard, System)
- 6.3 Object Properties
- 6.4 Data Properties
- 6.5 OWL 2 Axioms (equivalentClass, propertyChain, disjointWith)
- 6.6 SKOS Annotations and External Alignments
- 6.7 Competency Questions Validation
- 6.8 Ontology Validation

7. System Implementation

- 7.1 System Architecture Overview
- 7.2 Backend Implementation
 - 7.2.1 RDF/OWL Parsing (N3.js)
 - 7.2.2 API Endpoints
 - 7.2.3 Reasoning Engine
 - 7.2.4 SHACL Validation Logic
 - 7.2.5 Property Chain Inference (usesStandard)
- 7.3 Frontend Implementation
 - 7.3.1 Interactive Knowledge Graph Visualization
 - 7.3.2 User Interface Design
 - 7.3.3 Real-Time Validation
- 7.4 Integration and Testing

8. System Demonstration and Use Cases

- 8.1 Interactive Graph Visualization
- 8.2 Ontology Validation System
- 8.3 OWL Reasoning Capabilities
- 8.4 SPARQL Query Interface
- 8.5 Class Hierarchy Lookup
- 8.6 SHACL Shapes Validation
- 8.7 Measure Coverage Analysis
- 8.8 Real-Time Entity Compliance Checking

9. Evaluation and Results

- 9.1 Ontology Completeness
- 9.2 Validation Accuracy

- 9.3 Reasoning Performance
- 9.4 Usability Assessment
- 9.5 Case Studies
- 9.6 Comparison with Existing Approaches

10. Discussion

- 10.1 Problem Solutions
- 10.2 Contributions to the Field
- 10.3 Limitations
- 10.4 Future Work
- 10.5 Practical Implications

11. Conclusion

- 11.1 Summary of Contributions
- 11.2 Achievement of Objectives
- 11.3 Future Research Directions
